

PROCESSES

Process Name	Description
1. Raw Material Inspection	Ensuring the quality and quantity of incoming raw materials.
2. Material Storage	Proper storage of raw materials to prevent damage and contamination.
3. Production Setup	Configuring machinery and equipment for specific production runs.
4. Production Monitoring	Continuous monitoring of production parameters to maintain quality.
5. Quality Control	Regular inspection of products at various stages of production.
6. Waste Management	Efficient handling and disposal of production waste.
7. Inventory Management	Tracking and controlling inventory levels throughout the production process.
8. Equipment Maintenance	Scheduled maintenance and repair of production equipment.
9. Safety Protocols	Implementing and enforcing safety procedures for all workers.
10. Production Scheduling	Optimizing production schedules to meet customer demands.
11. Energy Efficiency	Reducing energy consumption through process optimization.
12. Final Product Inspection	Final quality check before products are shipped to customers.
