

### PROCESS

Manufacturing process

| Process               | Description  |
|-----------------------|--|
| 1. Material Selection | Choosing the right materials for the product.                |
| 2. Design             | Creating a detailed design for the product.                  |
| 3. Prototyping        | Building a small-scale model of the product.                 |
| 4. Tooling            | Creating the tools and equipment needed for production.      |
| 5. Production         | Manufacturing the product in large quantities.               |
| 6. Quality Control    | Inspecting the product to ensure it meets quality standards. |
| 7. Packaging          | Wrapping the product in protective packaging.                |
| 8. Distribution       | Shipping the product to customers.                           |
